Project Zero wins Gold at the InfraRed Awards

Our teams learn about rainwater harvesting systems at Clay Farm

Affinity Water attend NCE Water 2024

Going for Gold

Affinity Water's 'Bidwell Water Savers' have been awarded by our investors InfraRed with the prestigious Gold Standard Award!

This amazing recognition is a testimony of our commitment to innovation and sustainable use of water resources in the communities we serve. This is thanks to our outstanding project team, Gareth Barker, Lina Nieto, Julian Webster and Francesca Pumilia, and all partners involved.

New Civil Engineer (NCE) Water 2024

The Water Neutrality Team recently attended NCE Water 2024 where Julian Webster (Water Neutrality Engineering Manager), joined the Innovation Showcase.

The innovation showcase highlighted groundbreaking case studies within the industry and how our innovative project can revolutionise practice to create a sustainable and resilient future for water.

Clay Farm

We ran two sessions with AQUALITY, where they showed us their rainwater harvesting systems at Clay Farm in Cambridge. Clay Farm is a housing development of 208 homes and commercial accommodation with the system supplying all toilets in the development through a dedicated non-potable water pipe network. Could this be the future of sustainable developments? To find out more about the site, [click here](#).

What is a NAV?

New appointments and variations (NAV) are limited companies who can be appointed to provide a water and/or sewerage service to customers in an area which was previously provided by the incumbent monopoly provider.

These companies are appointed by Ofwat and have the same duties and responsibilities as any other statutory water company.

Within the Affinity Water region we have seen a 380% increase in NAV sites since 2015, so it is important for our project to help new entrants into the market.

The world's first water positive development at a NAV site
